

Design Ranking

After groups have come up with multiple options for a solution, they should sketch and give each a name or number. Then they complete this form, either individually or as a team, using a 0-5 rating to indicate how well a potential design meets each criterion. Note: groups should always rank criteria (Know Your Problem, page 103) before they use this form. The top three criteria from that ranking should be on this form.

0: Does not meet any criteria		3: Meets, or nearly meets, two criteria			
1: Meets, or nearly meets, one criterion		4: Nearly meets all three criteria			
2: Meets one or two criteria		5: Meets all three criteria
