Data-Driven Collaboration Process

	Collective Response
1. Analyze the Data Think about what the data show. What patterns do you notice? What do the data show? What implications can you draw from the data?	
2. Narrow and Prioritize Given the array of implications, prioritize an area or issue for improvement. What might be most pressing, given the current context? What might be most doable?	
3. Target a Focus Ensure that teams do not get overloaded with multiple targets and goals. How can each team have one or two goals that support the school's overall goals?	
4. Engage in Goal Setting Developing a coalition of staff members who will champion a cause is essential. When will the key stakeholders come together to establish new goals based on the data?	
5. Monitor Our Progress Ensuring an opportunity to make adjustments or refocus is critical. What will be the benchmark dates for communicating the team's progress?
