

## Ways to Strengthen Retrieval

Retrieval Tools	
Using self-quizzing time	Asking students to do the hard work of selectively remembering what they learned earlier (or the day before)
Letting students practice the learning several times using different strategies, such as flipcharts one day and verbal instruction the next	Using different problem types (such as for word and number problems, lists, narratives and characters, facts, inferences, and cause and effect)
Varying the process by making the retrieval social one day (with a partner or group) and independent the next (writing from memory)
