

Figure 5.1: Teacher Team Questions Regarding Common Assessments

Collaborative analyses of results by teams can inform future practice. As they collaborate, they must investigate and discuss the answers to the following questions. Specifically, teams will know the following information.

- To what extent did the team guide all students toward mastery?
- What concepts or skills need to be reviewed with the entire class?
- What factors have contributed to student difficulties?
- What additional strategies/resources are needed to ensure students improve their mastery?
- What patterns can be identified from student errors?
- Among collaborative team members, which instructional strategies proved to be most effective?
- Among collaborative team members, which instructional strategies proved not to be effective?
- How can the assessment be improved?
- Which students need more time and an alternative approach to master priority standards?
- With which standards and skills do these students need more time and an alternative approach?
