

Collaborative Guidesheet

Use this collaborative guidesheet to scaffold the inquiry process of thinking, planning, and investigating.

Area of Focus	My Ideas	My Partner's Ideas	Our Ideas (After Discussion)
Before the Investigation or Experiment			
What question do you want to study?			
What evidence do you want to look for in order to study your question?			
How will you record your evidence or data? For example, will you design a chart or table to hold your evidence?			
After the Investigation or Experiment			
What do your data tell you?			
How do your ideas connect with those of others in your class? How do your ideas connect with those of other scientists studying the same concepts?			
What are your conclusions? Record your conclusions by writing two or three paragraphs. Be sure your ideas are based on your evidence or data.
