

Collaborative Team Discussion: Integrating Technology

The following is intended for use in a standard forty-five- to fifty-minute collaborative team meeting.

As a team, define the ideal rating (never, seldom, often, or consistently) for each of the following actions involved in integrating technology. Is *consistently* ideal for A, B, C, and D? Is *often* the best choice? Record your collective team ideal rating for each action of integrating technology. Use the following key: never is zero days, seldom is one to three days, often is four to six days, and consistently is seven to ten days.

Integrating Technology Action	Ideal Rating
A. I allow for question 4 students to utilize technology in a meaningful and imaginative way.	
B. I design lessons which integrate technology in ways that challenge question 4 students to think deeper.	
C. I reinforce critical reading, critical thinking, or management with technology in lessons for my question 4 students.	
D. I review district policies, local protocol, and laws when implementing technology.	

Why are these the ideal ratings for each action?

How close are each of us to that ideal rating for each action?

How can we help each other get there?

For those of you who rated your actions as *often* or *consistent* on integrating technology, how does it feel for you, the teacher? What feedback do you hear from your students and their parents?
